Art Unit: 1755

Claims 1,5,6 and 17-19 are objected to because of the following informalities: The instant claim use commas in place of decimal points. Usage should be corrected to conform with US practice. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by the Fluka Chemika-BioChemika Catalogue.

Pages 1382-1383 of this reference offer for sale sorbitol having a purity greater than 99.5% by HPLC analysis. Sorbitol having a purity this great would be expected to have an optical density less than 0.01 since the art recognizes that the coloring that increases optical density in the S test is due to impurities.

Claims 1-17 are allowable over the prior art of record pending resolution of the objection to claims 1,5,6 and 17-19. The prior art of record fails to teach or suggest every limitation recited in the instant independent claim. For example, US 5773604 fails to teach or suggest treatment at a temperature of 30-100 C, Dagagov et al fail to teach or suggest treatment with the resin in hydroxide form and Saska et al explicitly teach away from treating sugars and sugar alcohols with strongly basic anion exchange resins in the hydroxide form (column 9, lines 5-6). Nor, does the prior art disclose the ease and efficiency of purification demonstrated by the instant invention.
